281482 – Internship, Site Reliability Engineer, Infrastructure Engineering (Winter/Spring 2027)

- **Python, Go, Bash:** 7 years of Python and 2 years of Go across many projects; Bash for scripting.
- **Linux:** Daily driver for years; recent work with FUSE filesystems, permissions, and networking.
- **Reliable Infrastructure:** Hand-built homelab at nearly 100% uptime; self-taught in reliability and performance.
- **Observability:** Prometheus and Grafana for homelab metrics.
- **CI/CD and IaC:** Basic CI/CD experience; experimenting with Terraform for my homelab.
- **Containers, Networking:** Run 40+ homelab containers with Docker Compose; Tailscale networking contributions.
- **Collaboration:** Led DevOps for Planyear AI's alpha; framed technical work as outcomes for a non-technical manager.
- **SQL:** Designed PostgreSQL schemas at Planyear AI, modeling org hierarchies and relationships with foreign keys.

281467 – Internship, Backend Engineer, Infrastructure Engineering (Winter/Spring 2027)

- **Python and Go:** 7 years of Python (professional and personal) and 2 years of Go across many projects.
- **Backend and APIs:** Built Planyear AI's entire backend, APIs, and infrastructure; REST APIs in personal projects.
- **SQL:** Designed PostgreSQL schemas at Planyear AI, modeling org hierarchies and relationships with foreign keys.
- **Docker:** Ran Planyear AI's infrastructure and 40+ homelab containers with Docker Compose.
- **Testing and Observability:** Testing, evals, tracing (self-hosted Langfuse), and performance tuning at Planyear AI.
- **Production Curiosity:** Contribute to Tailscale's open source code and work with its low-level APIs.
- **Cross-Functional:** Startup role spanning backend, infrastructure, and product.

280820 – Internship, Fullstack Engineer, Applications Engineering (Winter/Spring 2027)

- **Python and Go:** 7 years of Python (professional and personal) and 2 years of Go across many projects.
- **Infrastructure:** Hand-built homelab at nearly 100% uptime, running 40+ containers with Docker Compose.
- **Production Curiosity:** Contribute to Tailscale's open source code and work with its low-level APIs.
- **React, CSS, SQL:** Built frontend features at Planyear AI with React, CSS, and PostgreSQL.

282303 – Internship, Software Engineer, Finance Programs (Winter/Spring 2027)

- **Object-Oriented Languages:** Object-oriented Python; ready to work primarily in C#.
- **REST APIs:** Built and consumed REST APIs at Planyear AI for auth and data presentation.
- **Web Automation:** Automated Kijiji scraper feeding an automated Facebook Marketplace poster.
- **SQL:** Designed PostgreSQL schemas at Planyear AI, modeling org hierarchies and relationships with foreign keys.
- **OCR and Documents:** Built OCR and LLM structuring pipelines at Planyear AI, including an 8-stage extractor.
- **Self-Direction:** Built Planyear AI's product from scratch on a greenfield startup codebase.
- **Stakeholders:** Framed technical work as outcomes for a non-technical manager at Planyear AI.

282292 – Internship, Software Engineer, AI Data Infrastructure (Winter/Spring 2027)

- **Python and Go:** 7 years of Python (professional and personal) and 2 years of Go across many projects.
- **Linux and Infrastructure:** Daily driver for years; homelab with VLANs, VPNs, Docker virtual disks, and Terraform.
- **Databases:** PostgreSQL and Redis for storage and caching at Planyear AI.
